

Sulfitobacter: Do Its Largest PhaC Clusters Share a Range?

The 6 Sulfitobacter-dominant clusters with >200 genomes (of 39 total), overlaid — one point per distinct genome, colored by cluster

Average depth = mean depth_m across distinct genomes with resolved depth in that cluster (missing values dropped, not imputed as zero). Circles plotted largest-cluster-first so smaller clusters' points stay visible on top; overlap between clusters is real overlap.
