

Sulfitobacter: Do Its Largest PhaC Clusters Share a Range?

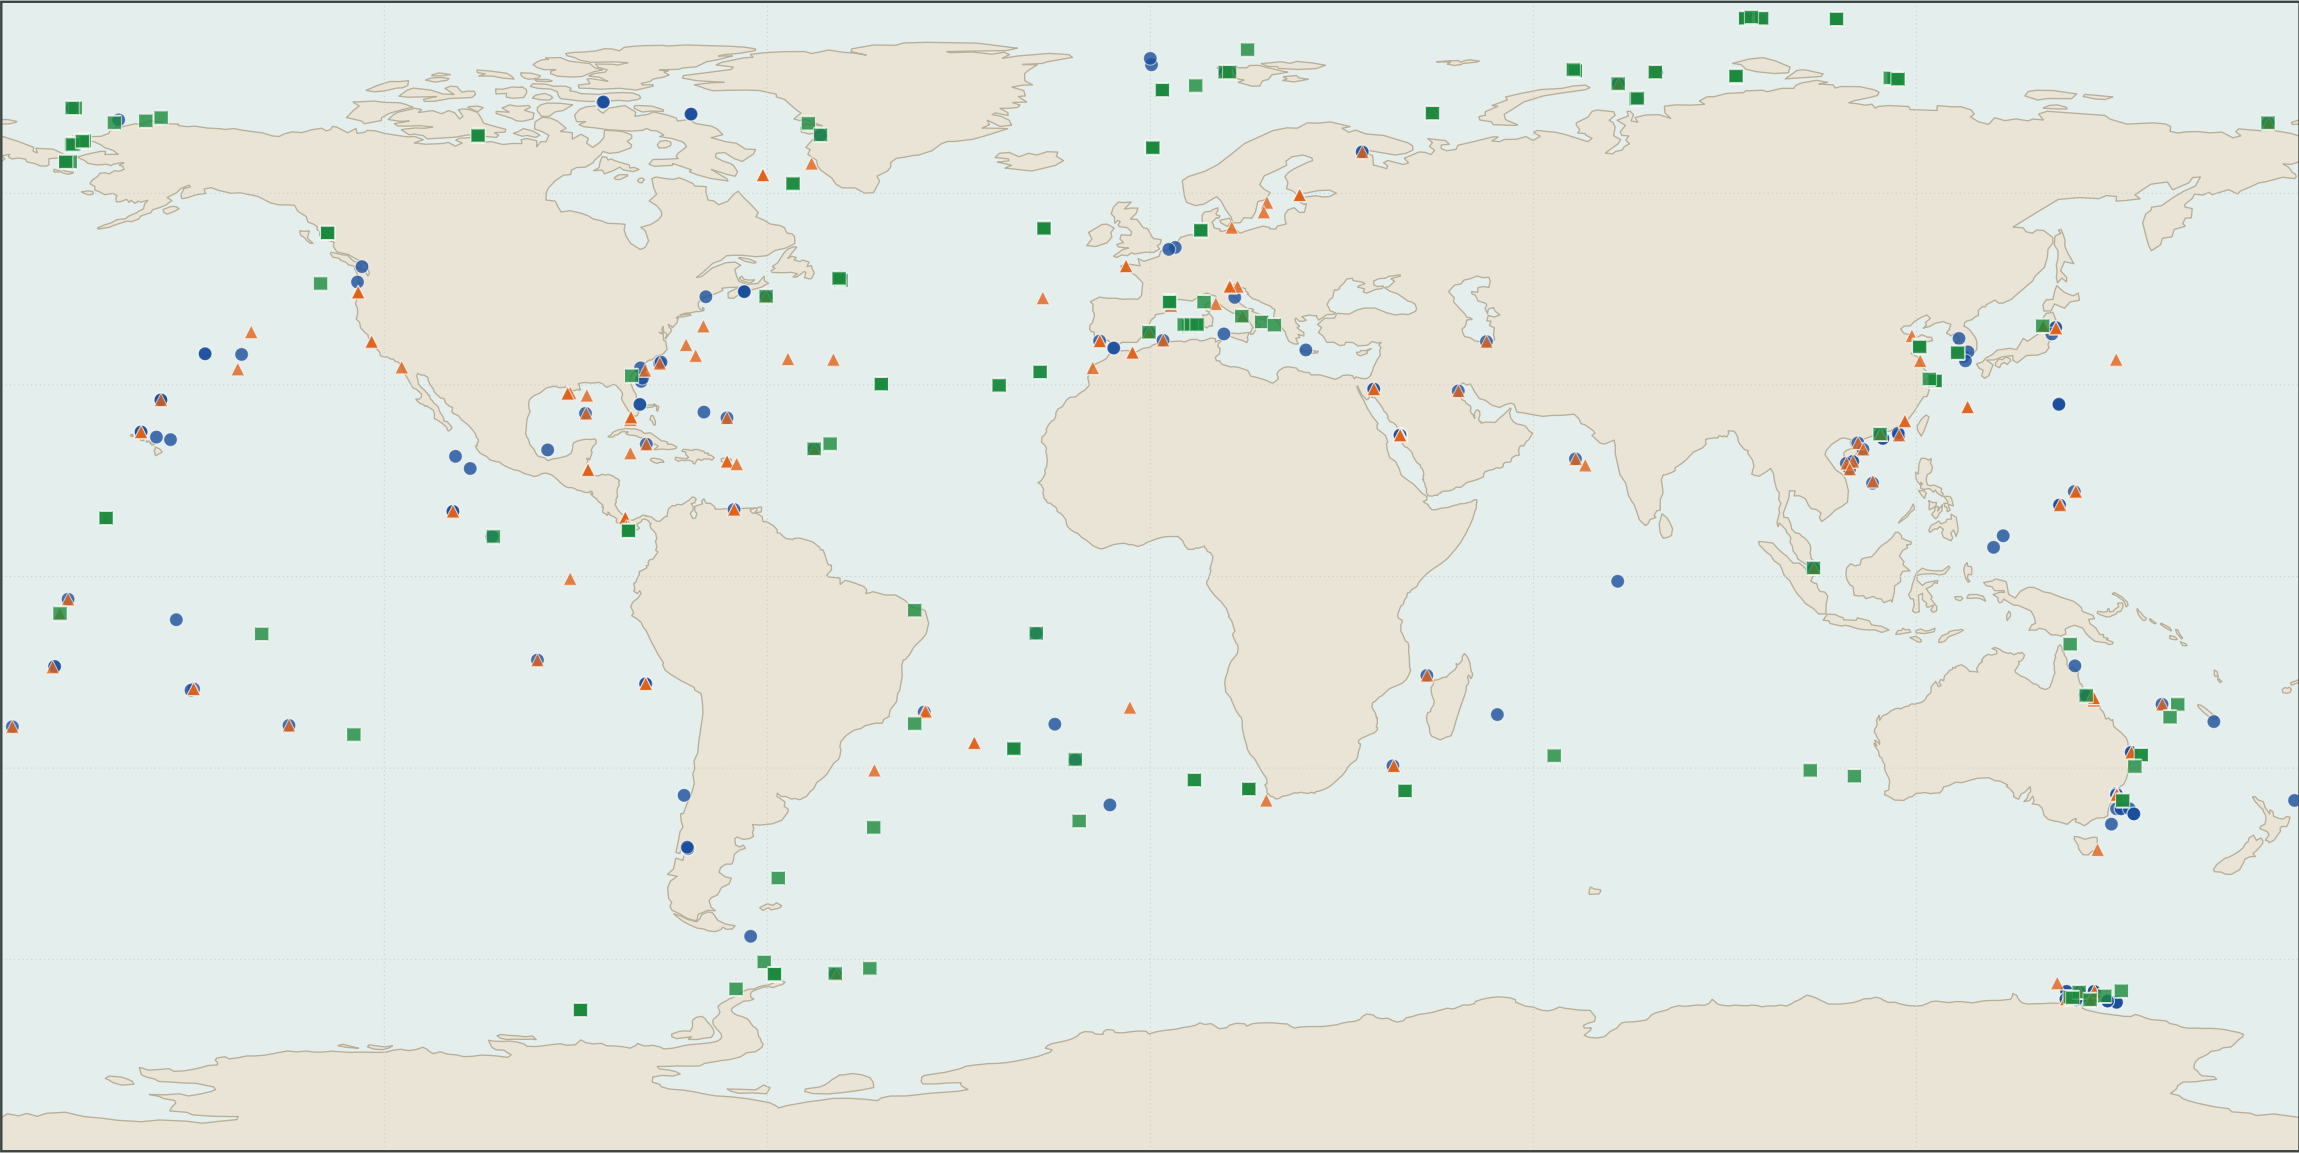

The 3 Sulfitobacter-dominant clusters with >200 genomes (of 23 total), overlaid — one point per distinct genome, colored by cluster

Cluster

- **...000045457530**
397 genomes
- **...000018755333**
455 genomes
- **...000126950826**
241 genomes

Avg. depth

- 227 m (n=145)
- 166 m (n=213)
- 149 m (n=115)

Average depth = mean depth_m across distinct genomes with resolved depth in that cluster (missing values dropped, not imputed as zero). Circles plotted largest-cluster-first so smaller clusters' points stay visible on top; overlap between clusters is real overlap.
