

# phaC prevalence across ocean habitats

27,769 of 257,321 screened OMDB genomes (10.8%) carry a phaC hit. Habitats with <200 genomes and non-marine/control samples excluded. "Expected %" = phylum-composition-standardized rate (each habitat's own phylum mix, applied to that phylum's phaC rate elsewhere in the ocean) from the Cochran-Mantel-Haenszel phylum-controlled test -- see figures/PHA\_CLEAN\_RESULTS.md §5.3.1 and figures/phac\_habitat\_phylum\_enrichment\_test.tsv.
