

phaC prevalence by sampling location

2° x 2° grid cells, colored by % of screened genomes (MAGs) carrying phaC — 815 of 1072 occupied cells shown (≥15 genomes/cell) · overall rate 10.7%

254,872 OMDB genomes with known coordinates (excludes freshwater/terrestrial/control; includes host-associated e.g. sponge/coral tissue), 27,300 *phaC*-positive.
A cell can be dominated by one sample or study -- coverage was prioritized over per-cell independence here.
