

Does phaC Prevalence Vary by Region?

% of PHA-pathway-gene-carrying genomes (251,858 total) that specifically carry phaC, by 10°×10° region — colored 0 to 88% (the observed max)

Denominator is genomes with ≥ 1 hit against any of the 16 searched PHA-pathway families (not the full raw genome catalog, which isn't available locally) — this is "% of PHA-gene genomes that specifically carry phaC," not "% of all ocean bacteria." Hatched grey cells have fewer than 20 genomes and are masked rather than colored, since a handful of genomes can swing a % wildly.
