

UBA868: Do Its Largest PhaC Clusters Share a Range?

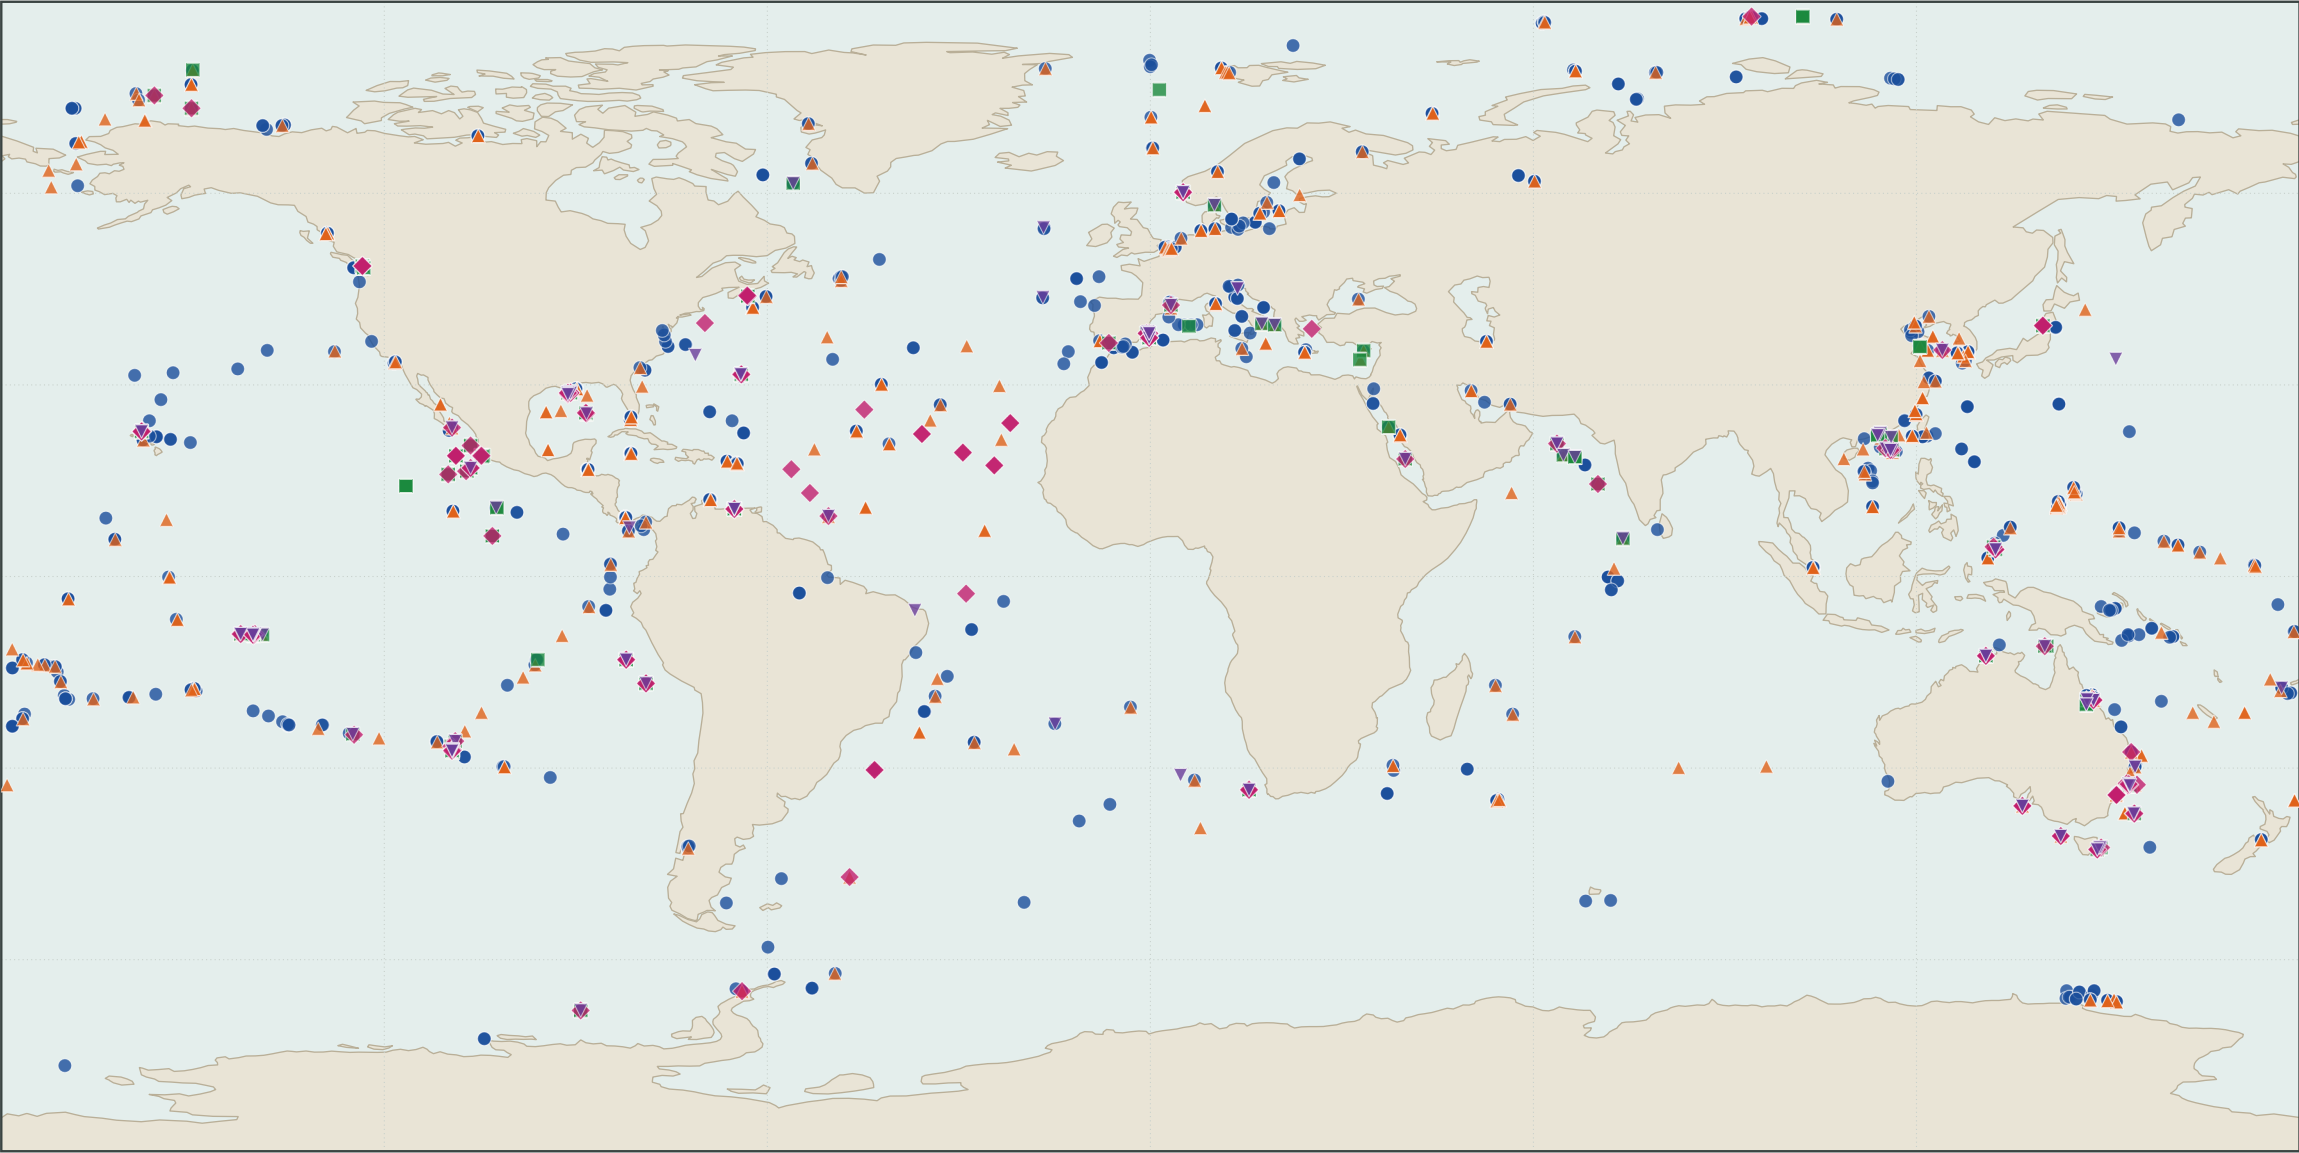

The 5 UBA868-dominant clusters with >200 genomes (of 23 total), overlaid — one point per distinct genome, colored by cluster

Cluster

-  ...000095227834
1,135 genomes
-  ...000022569063
228 genomes
-  ...000131018176
2,475 genomes
-  ...000182116006
285 genomes
-  ...000172455166
213 genomes

Avg. depth

- 406 m avg depth (n=279)
- 209 m avg depth (n=111)
- 178 m avg depth (n=292)
- 86 m avg depth (n=74)
- 45 m avg depth (n=65)

Average depth = mean depth_m across distinct genomes with resolved depth in that cluster (missing values dropped, not imputed as zero). Circles plotted largest-cluster-first so smaller clusters' points stay visible on top; overlap between clusters is real overlap.
