

phaC diversity: rank-abundance and sampling-effort framing

20,211 phaC_cluster0.7 clusters (70% identity) from 67,501 phaC-positive genomes. Shaded bands = min-max across 30 (genome-order) / 200 (study-order) random-order permutations.

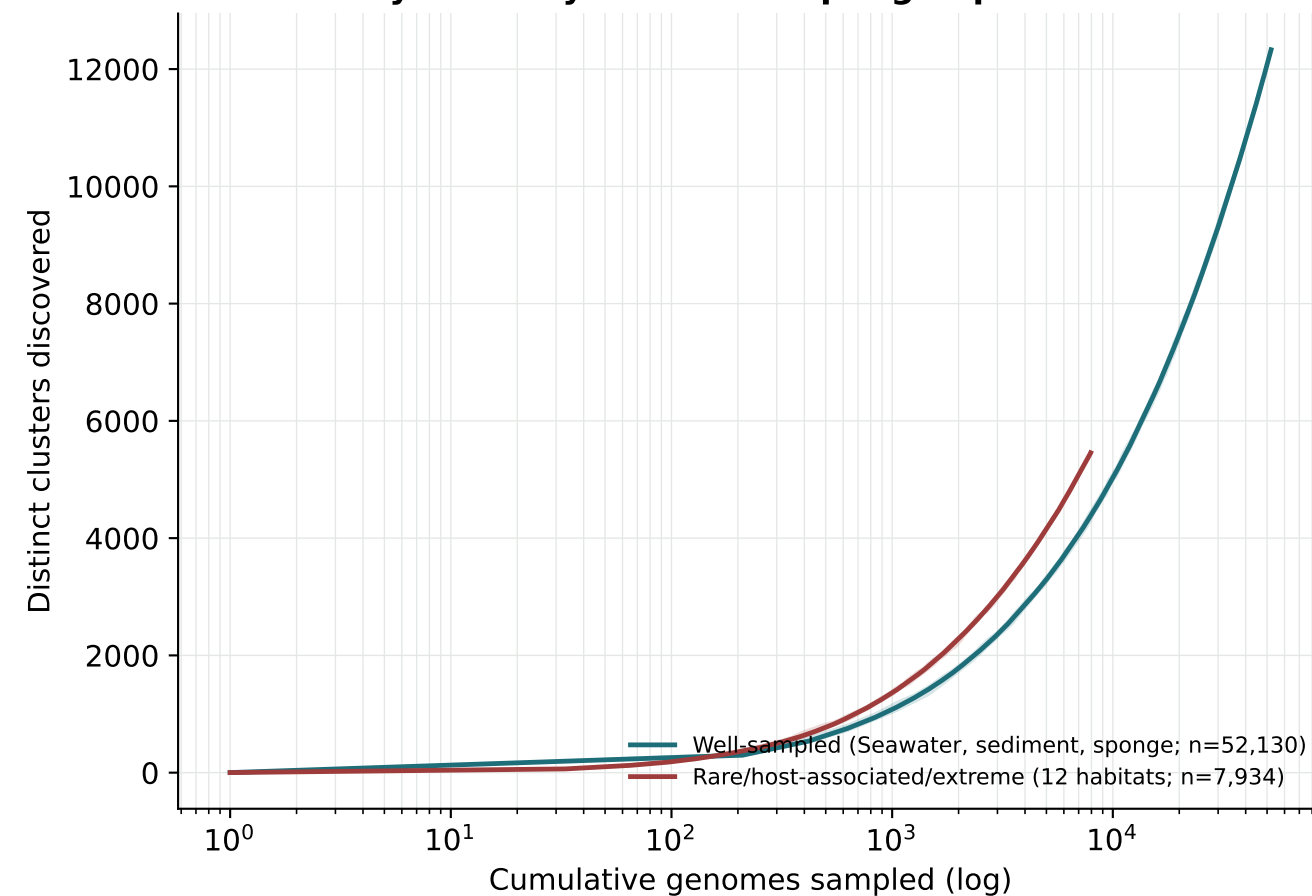

A. Rank-abundance of phaC clusters

B. Discovery curve: genome order vs. study order

C. Discovery curve by habitat sampling depth

D. Discovery curve by depth (sparse data -- see caveat)
